

ONS ON-CALL™

The Guided Symptom Assessment Tool

Guided symptom assessments

Responsive to the patient symptom experience using patient-friendly language

Highly regarded and evidence-based

Assessment content derived from the *Chemotherapy and Immunotherapy Guidelines* and other ONS clinical resources

Risk Identification

Identifying responses that contribute to symptom toxicity grading

Data Dashboard

Interactive dashboard for population-level symptom data analysis

Built by oncology nurses for nurses . . . and their patients!

ONS On-Call™ is an oncology-specific decision support tool ensuring best practices in the clinic and institution by guiding nurses through standardized, evidence-based symptom assessments. This powerful, cloud-hosted tool leverages the proprietary evidence-based resources of ONS with patient-reported symptoms. On-Call™ increases staff efficiency while focusing on proactive care, leading to improved patient outcomes and satisfaction. ONS On-Call employs an industry leader in enterprise no-code application technology to build and monitor this integrated platform with a focus on data, processes, and user safety, and security. Additionally, On-Call relies on a foundational FHIR® API platform to streamline the connectivity and interoperability with electronic health records.
