November 17, 2022

The Honorable Patty Murray   The Honorable Rosa DeLauro
Chair                      Chair
Subcommittee on Labor, Health and Human Services, Education, and Related Agencies
Committee on Appropriations
United States Senate
Washington, DC 20510

The Honorable Roy Blunt   The Honorable Tom Cole
Ranking Member           Ranking Member
Subcommittee on Labor, Health and Human Services, Education, and Related Agencies
Committee on Appropriations
United States Senate
Washington, DC 20510

Dear Chair Murray, Chair DeLauro, Ranking Member Blunt, and Ranking Member Cole:
As you negotiate final appropriations bills for fiscal year 2023, we urge you to fund the Centers for Disease Control and Prevention’s (CDC) Office on Smoking and Health (OSH) at $261.5 million, which is the amount in the Chairman’s mark released by the Senate Appropriations Committee in July. This $20 million increase would help OSH respond to high rates of e-cigarette use among youth and the devastating toll that tobacco continues to take on our nation’s health.

Tobacco use is the leading preventable cause of death in the United States, responsible for more than 480,000 deaths and approximately $241 billion in health care costs each year. Nearly one in three heart disease deaths and cancer deaths and nearly eight in 10 chronic obstructive pulmonary disease (COPD) deaths are caused by tobacco use. The tobacco use that causes this harm almost always begins during adolescence. Most adults who smoke want to quit, but overcoming an addiction to nicotine is difficult and often requires multiple quit attempts.

Youth continue to use e-cigarettes at alarming levels. CDC and the Food and Drug Administration’s (FDA) most recent National Youth Tobacco Survey showed that more than 2.5 million middle and high school students reported using e-cigarettes in the first half of this year. Alarmingly, 46 percent of high school users reported use on 20 days or more a month, including 30.1 percent who reported daily use, a sign that youth are addicted. According to the Surgeon General, e-cigarettes expose users to nicotine and other potentially harmful substances and are not safe for youth and young adults. A more robust public health response is needed to prevent e-cigarettes from placing a new generation at risk for nicotine addiction and tobacco use.

While smoking rates overall have declined, over 31 million people in the U.S. continue to smoke cigarettes. Smoking is higher among certain groups and in particular regions of the country, including people with lower incomes and lower levels of education, Native Americans, people with behavioral health conditions, and the LGBTQ community. Black Americans die from smoking-caused diseases at far higher rates than other racial or ethnic groups despite starting to smoke at a later age, smoking fewer cigarettes per day, and being more likely to make a quit attempt. Communities that are disproportionately impacted by tobacco are often the targets of tobacco industry marketing, have fewer resources for tobacco cessation treatments, and experience financial and other stressors that can lead to continued tobacco use. Smoking is a major cause of health disparities and targeted action is needed to reduce tobacco use where it remains high and eliminate disparities in tobacco-caused diseases.

OSH plays a vital role in reducing tobacco use. It provides grants to states and territories to support tobacco prevention and cessation programs, runs a highly successful national media campaign called Tips from Former Smokers (Tips), conducts important research on tobacco use, and develops best practices for reducing it. Additional resources will allow OSH to address the threat to public health posed by high rates of youth e-cigarette use while continuing to prevent and reduce all tobacco use. With additional resources:

- CDC could better advance health equity by strengthening efforts to assist communities who are disproportionately harmed by tobacco products and targeted by the tobacco industry, including by designing and supporting state efforts to implement prevention and cessation programs that are tailored to address their specific needs.

1 References to tobacco in this letter refer to commercial tobacco and not ceremonial and traditional tobacco which is used by some American Indian communities.
• CDC could enhance efforts to end youth and young adult tobacco use, including e-cigarette use, by providing more resources to state and local health departments; educating youth, parents, health professionals and others about tobacco products and the harms associated with their use; and identifying additional evidence-based strategies to prevent youth and young adults from initiating tobacco use.

• CDC could expand a program that we know works to reduce tobacco use: the Tips media campaign. Tips helped approximately one million people who smoke quit for good from 2012 through 2018. As a result, it has prevented an estimated 129,100 smoking-related deaths and saved an estimated $7.3 billion in health care costs.

We appreciate that both the Senate and House FY 2023 Labor, Health and Human Services, Education and Related Agencies Appropriations bills recognize the significant toll that tobacco takes on our nation’s health and include increased funding for OSH. As you finalize appropriations legislation for fiscal year 2023, we urge you to fund OSH at the Senate’s proposed funding level of $261.5 million.

Sincerely,
