

March 16, 2023

The Honorable Robert Aderholt  
 Chairman  
 Subcommittee on Labor, Health and Human  
 Services, Education, and Related Agencies  
 Committee on Appropriations  
 United States House of Representatives  
 Washington, DC 20515

The Honorable Rosa DeLauro  
 Ranking Member  
 Subcommittee on Labor, Health and Human  
 Services, Education, and Related Agencies  
 Committee on Appropriations  
 United States House of Representatives  
 Washington, DC 20515

Dear Chairman Aderholt and Ranking Member DeLauro:

As your Subcommittee moves forward with the FY 2024 Labor, Health and Human Services, Education and Related Agencies Appropriations bill, we urge you to increase funding for the Centers for Disease Control and Prevention’s (CDC) Office on Smoking and Health (OSH) by \$63.5 million, for a total of \$310 million. This increase would help OSH respond to high rates of e-cigarette use among youth and the devastating toll that tobacco<sup>1</sup> continues to take on our nation’s health.

Tobacco use has long been the leading preventable cause of death in the United States. Tobacco is responsible for more than 480,000 deaths and approximately \$241 billion in health care costs in the United States each year. Nearly one in three heart disease deaths and cancer deaths and nearly eight in 10 chronic obstructive pulmonary disease (COPD) deaths are caused by tobacco use. Tobacco use almost always begins during adolescence, and most adult smokers want to quit, but overcoming an addiction to nicotine is difficult and often requires multiple quit attempts.

Youth continue to use e-cigarettes at alarming levels. CDC and the Food and Drug Administration’s (FDA) most recent National Youth Tobacco Survey showed that more than 2.5 million middle and high school

<sup>1</sup> References to tobacco in this letter refer to commercial tobacco and not ceremonial tobacco which is used by some American Indian communities.

students reported using e-cigarettes last year. Alarming, 46 percent of high school e-cigarette users reported use on 20 days or more a month, including 30.1 percent who reported daily use, a sign that youth are addicted. According to the Surgeon General, e-cigarettes expose users to nicotine and other potentially harmful substances and are not safe for youth and young adults. A more robust public health response is needed to prevent e-cigarettes from placing a new generation at risk for nicotine addiction and tobacco use.

While smoking rates overall have declined, over 31 million people in the U.S. continue to smoke cigarettes. Smoking is higher among certain groups and in particular regions of the country, including people with lower incomes and lower levels of education, Native Americans, people living in rural communities, people with behavioral health conditions, and the LGBTQ community. Black Americans die from smoking-caused diseases at far higher rates than other Americans despite starting to smoke at a later age, smoking fewer cigarettes per day, and being more likely to make a quit attempt. Communities with higher rates of tobacco use are often the targets of tobacco industry marketing and have fewer resources for tobacco cessation. Targeted action is needed to reduce tobacco use where it remains high.

OSH has a vital role to play in addressing tobacco use. OSH provides grants to states and territories to support tobacco prevention and cessation programs, runs a highly successful national media campaign called Tips from Former Smokers (Tips), conducts research on tobacco use, and develops best practices for reducing it. Additional resources will allow OSH to address the threat to public health posed by high rates of youth e-cigarette use while continuing to prevent and reduce other forms of tobacco use. With additional resources:

- CDC could strengthen efforts to assist groups who are disproportionately harmed by tobacco products, including by designing and implementing prevention and cessation programs that are tailored to address their specific needs.
- CDC could enhance efforts to end youth and young adult tobacco use, including e-cigarette use, by providing more resources to state and local health departments; educating youth, parents, health professionals, communities, and others about tobacco products and the harms associated with their use; and identifying evidence-based strategies to protect youth and young adults from initiating tobacco use.
- CDC could expand a program that we know works to reduce tobacco use: the Tips media campaign. From 2012 through 2018, CDC estimates that more than 16.4 million people who smoke attempted to quit and approximately one million smokers have quit for good because of the Tips campaign. As a result, the Tips campaign has helped prevent an estimated 129,100 smoking-related deaths and saved an estimated \$7.3 billion in health care costs.

We appreciate that the Consolidated Appropriations Act, 2023 (P.L. 117-328) increased funding for OSH by \$5 million in FY 2023. Additional investments in tobacco prevention and cessation will save lives, reduce tobacco-related health disparities, and reduce the cost of treating tobacco-caused disease. We urge you to increase funding for CDC's OSH from \$246.5 million to \$310 million, which will enable CDC to address the challenges posed by e-cigarettes, continue to make progress reducing the death and disease caused by other tobacco products, and strengthen efforts to assist groups disproportionately harmed by tobacco products.

Sincerely,
