

Putting Evidence Into Practice (PEP): What's New in Diarrhea

Changes Since Prior Topic Update

Last topic update: February 27, 2017

The PEP team reviewed several interventions for diarrhea associated with immune therapies. The following therapies are currently at Expert Opinion level:

- Antidiarrheals for low-grade diarrhea
- High-dose steroids for severe diarrhea
- Steroids for moderate diarrhea
- Infliximab for unresolved or refractory diarrhea

A new intervention, budesonide for chemotherapy-induced diarrhea was categorized as Effectiveness Not Established. Additionally, a new intervention, hyperbaric oxygen for radiation-induced diarrhea, was categorized as Effectiveness Not Established.
